BACKGROUND

As part of our continued commitment to bringing greater transparency to the carbon offset market, ecosecurities publishes a monthly International Carbon Offset Price Index. The Index is based on verified transactions that occurred during a specific period. The analysis of transactions is based on the Clean Development Mechanism (CDM) Registry and the Gold Standard Registry marketplaces.

METHODOLOGY

To ensure the accuracy of our Index, ecosecurities undertakes a monthly price scanning of the targeted platforms and records all executed transactions. In case current transaction prices are no longer available, recorded past transaction prices from the projects are used instead. If that option is also not available, a price estimate based on similar projects' transaction prices is used. Credit's prices are checked once a month and updated in case of change. Some of the elements listed on ecosecurities International Carbon Offset Price Index are described in more detail below:

Average price: Average transaction prices per credit issued based on monthly transaction volumes. Outliers may be excluded.

Total Revenue (USD): Total revenue generated by the sale of CERs based on the transaction price. It does not include fees and other costs incurred by the seller and/or buyer.

Number of projects: Total number of projects that executed transactions during the month analysed
